

Comparison of Cylinder Count to Engine Displacement

Ben Huang

Big Dawg has commissioned this report to investigate his claim that cars with more cylinders do not have bigger engines. To address this research question, we will analyze the `mtcars` dataset and calculate the mean engine displacement for each cylinder count. This analysis will help determine if there is a relationship between the number of cylinders and engine displacement.

Quarto

Quarto enables you to weave together content and executable code into a finished document. To learn more about Quarto see <https://quarto.org>.

Running Code

When you click the **Render** button a document will be generated that includes both content and the output of embedded code. You can embed code like this:

```
1 + 1
```

```
[1] 2
```

```
library(tidyverse)
```

```
-- Attaching core tidyverse packages ----- tidyverse 2.0.0 --
v dplyr      1.1.4      v readr      2.1.5
v forcats    1.0.0      v stringr    1.5.1
v ggplot2    3.5.1      v tibble     3.2.1
v lubridate  1.9.3      v tidyr      1.3.1
v purrr      1.0.2

-- Conflicts ----- tidyverse_conflicts() --
x dplyr::filter() masks stats::filter()
x dplyr::lag()     masks stats::lag()
i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become
```

```
library(knitr)
library(kableExtra)
```

Attaching package: 'kableExtra'

The following object is masked from 'package:dplyr':

group_rows

```
mtcars
```

```
mean_displacement <- mtcars %>%
  group_by(cyl) %>%
  summarise(mean_disp = mean(displacement, na.rm = TRUE))
mean_displacement %>%
  kable(col.names = c("Number of Cylinders", "Mean Displacement (cu. in.)")) %>%
  kable_styling(full_width = FALSE, position = "center")
```

Number of Cylinders	Mean Displacement (cu. in.)
4	105.1364
6	183.3143
8	353.1000

You can add options to executable code like this

```
[1] 4
```

The `echo: false` option disables the printing of code (only output is displayed).
